

Profiles – Part 1

Graph Profile

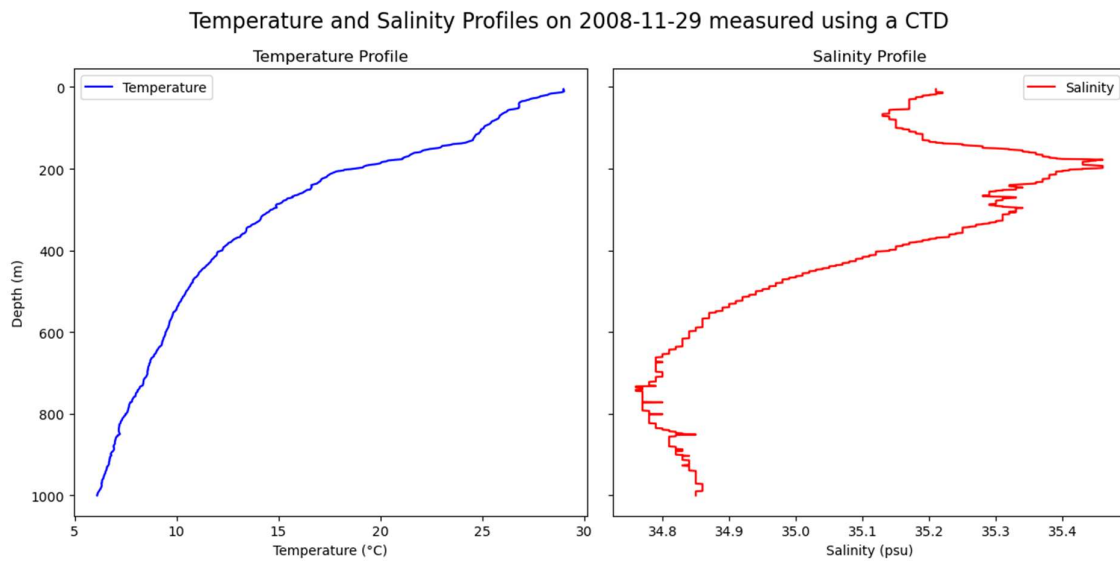

Figure 1: Line graphs displaying the temperature and salinity profile measured using a CTD.

Time series and Other Data – Part 2

Time Series Graph

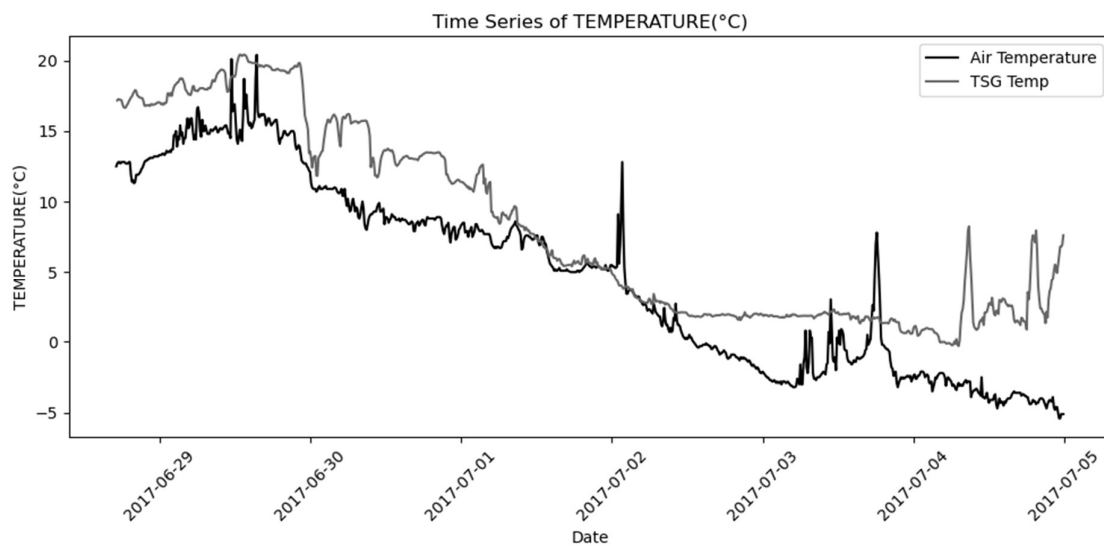

Figure 2: Line graph displaying the temperatures (°C) taken roughly every 10 minutes from 17:10pm to 23:50 between the 28/06/2017 to the 04/07/2017. These measurements were collected aboard the South African Agulhas II vessel. The temperatures measured and displayed include both air temperature as well as sea surface temperature.

Histogram

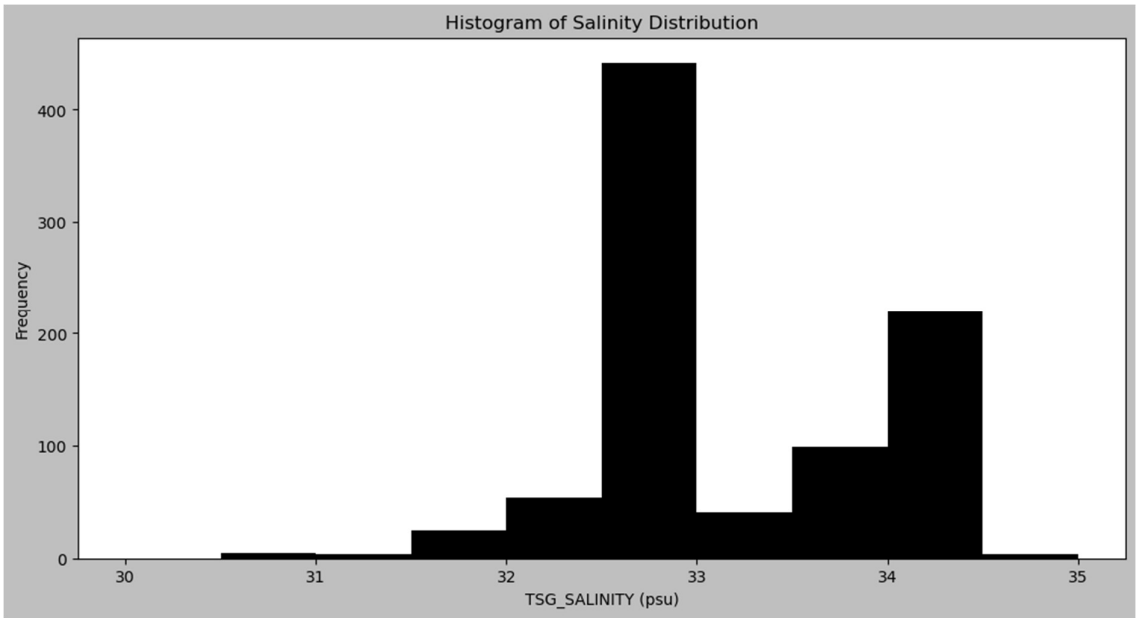

Figure 3: Histogram displaying the frequencies of sea surface salinity (psu) that was measured with a TSG ((Thermosalinograph). The data collected every ten minutes starting from the departure time at 17:10pm on the 28/06/2017 and ending on the 23:50pm on the 04/07/2017. The data was collected whilst aboard the SA Agulhas II.

Statistical Table

Table 1: A statistical summary of the average air temperature (°C) and salinity (psu) measured between 28/06/2017 and 04/07/2017. The standard deviation as well as interquartile range were calculated.

	Mean	Standard Deviation	Interquartile Range
Air Temperature (°C)	4.882541436464088	6.682762440695766	11.6
Salinity (psu)	33.11721111725664	1.1394954338915082	1.3183499999999952

Scatter Plot

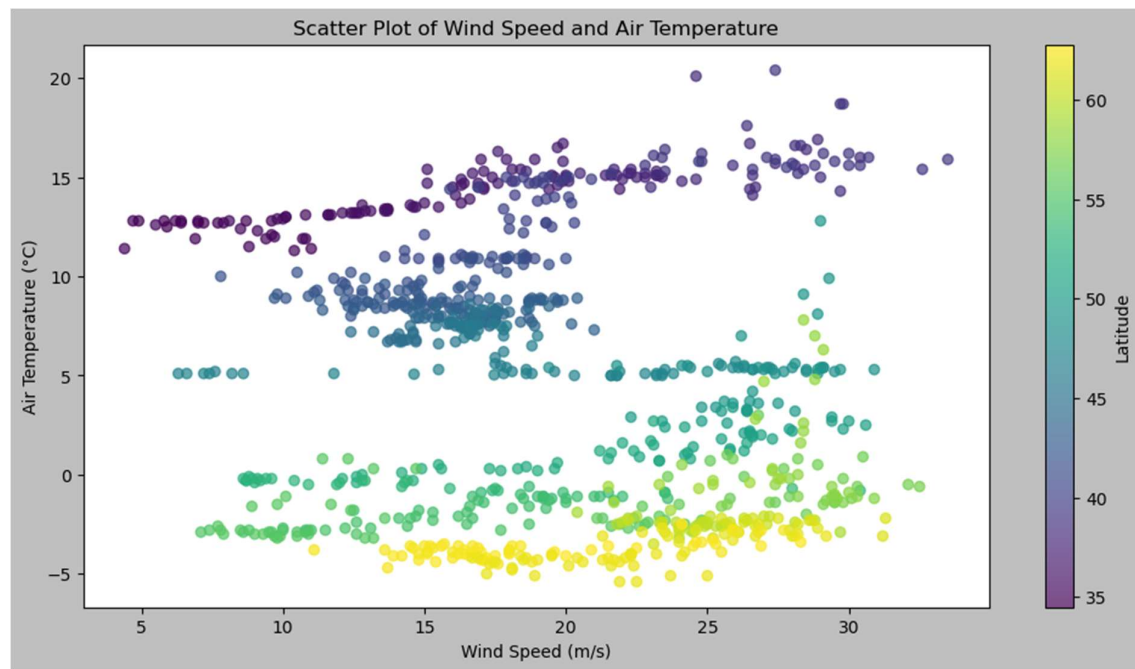

Figure 4: Scatter plot showcasing air temperature (°C) and wind speed (m/s) across latitudes from 35° to 60° and above.
